2^7
ball radius ρ (lattice: $\rho/s_8 = 1, 2, 4, 8$)
lattice weight: one point per circle
ring weight: circles on one surface Σ_6
lattice weight, $\alpha = 4$, balls centred on the axis
ring weight, $\alpha = 2$, balls crossed by Σ_8
Lebesgue control ($\lambda_1\rho^2 \to 4.33$)
$\propto \rho^{-(\alpha-1)}$
